Professional Summary

Software Engineer with experience in developing web applications and integrated business solutions across diverse enterprise environments. Skilled in full-stack development using Angular and PHP/Laravel, API integration, and business process automation.

Experienced in enterprise and legacy systems (IBM i / AS400) as well as low-code platforms (Microsoft Power Platform), with a focus on scalable solutions, software maintenance, and effective collaboration within technical teams.

Professional Experience

Software Engineer, Studio Cicchelli S.r.l.

October 2023 – March 2026

- Developed software applications and components for business solutions based on Microsoft Power Platform and web technologies.
- Integrated enterprise systems through APIs and automated workflows.
- Designed and developed responsive web interfaces and AI chatbot user interfaces using JavaScript/TypeScript and Chainlit.
- Managed and modeled business data using Azure SQL and Dataverse.
- Administered Microsoft 365 environments, including tenant management, security, identities, and groups.
- Provided technical support and developed automation solutions to improve internal business processes and user productivity.

Software Engineer, Computer Sharing Sud S.r.l.

December 2022 - April 2023

- Developed and maintained applications on IBM i (AS/400) platforms.
- Modernized legacy systems and integrated them with contemporary software services and architectures.
- Worked with RPG, RPG Free (ILE), and RDi tools to support enterprise applications.

Administrative Assistant, Labelmar S.n.C.

September 2016 - April 2018

- Managed warehouse and logistics operations.
- Optimized storage space and product distribution processes.
- Supported inventory management, loading/unloading operations, and stock control activities.

Technical Skills
